Code Club 1 | UX/UI Design

Overview:

I'm starting a business called 'The Odd Sock Shop' and I need your help building wireframes for this website.

Based on the following specifications, create a set of MVP wireframes that take into account the UX/UI specifications you've learned this week.

Site Overview:

The Odd Sock Shop allows users to buy, swap and sell their odd socks.

Specifications:

- Users can login, logout and sign up
- Users can browse the available socks
- Users can add to cart any socks they would like to buy
- Users can remove socks from their cart
- Users can upload socks they would like to sell using a web form
- Users can edit their listings
- Users can message other users regarding their listings
- Users can finalise their purchases using an in-site secure payment portal.

With this as an MVP sit, you may also provide recommendations for improvements for future iterations.

Additional Notes:

- You can use any form to present your wireframes (ie. pen and paper, Miro, Canva, Slides etc.)

Outcome:

Present your Wireframes to the group detailing the decisions you've made. You will have up to 10 minutes to present.
