

Technology Academy | Code Club

Code Club 5 | Angular

Stage 1:

Display a button on the screen and a button count. Create a component so that each time the button is clicked, the button count increases by one.

Stage 2:

Create a second button that decreases the count by one each time it is pressed.

Stage 3:

Create a third button that clears the count when pressed.

Stage 4:

Create a fourth button of your choice that corresponds to impacting the button count.
